

Finvision is a Belgian company that offers a broad spectrum of value added services in the fields of financial management, accountancy, controlling, reporting, tax, audit, outsourcing of financial profiles and selection of financial profiles, to entrepreneurs, small businesses, and CFOs of large (international) companies and multinationals. Finvision has six offices on the Kortrijk-Brussels-Hasselt axis and employs over 80 fulltime and part-time finance professionals, which all share the same principle: added value optimization for their clients.

Geert Van Hemelryck is Partner at Finvision and oversees the activities in the Waasland office (Sint-Niklaas). Geert and his eleven direct colleagues have been working with Onea for many years now. Van Hemelryck: "Our clients range from sole proprietorships to large organizations. Finvision is the trusted partner of these organizations for any financial, bookkeeping and accounting topics. Of course, they would like to work in the most cost efficient and effective manner. Onea facilitates this. We work with Onea for digitization of all invoices of our customers, both incoming and outgoing. In many cases, our customers scan these invoices by themselves, thus allowing us to focus on more relevant, value adding activities. An additional advantage for us, is that the workload is more spread out and therefore becomes more manageable."

All Finvision's customers have the possibility to make use of Onea's digital archive. Van Hemelryck: "This is particularly appealing, not only to our large enterprise clients, but also to small organizations. It supports our vision that our client is the only rightful owner of its own digital archive. Besides, it significantly enhances our search activities."

Onea can be connected to all major accounting software solutions. Van Hemelryck: "Many of our clients use Exact Online or Kluwer. Onea provides a direct interface for this. The functionality is not limited to scanning; Onea can be integrated with predefined workflows as well. This is a major differentiator compared to other tooling."

Finvision started working with Onea approximately six years ago. The company has always used Onea's cloud solution and was initially connected to Kluwer. The implementation was carried out in a smooth, rapid manner. Van Hemelryck: "Implementation of a new tool, *any* new tool, should be finalized in two days maximum. Onea is easy to implement and has a very intuitive user interface. The entire Finvision Waasland team is working with Onea on a daily basis and onboarding new team members is a breeze. And when we migrated to Exact Online, Onea was migrated quickly and easily in parallel as well."

Furthermore, Finvision endorses the roadmap that Onea laid out. Van Hemelryck: "Onea continues to develop on its solution. And they take our feedback into account too! Several new features and functionalities which were suggested by us have been implemented in new product releases. As a result, Onea remains at the forefront of new technological developments, which is great for our customers."
